

## **DMG closes crypto-analytics and AI deal**

*As a general rule, the most successful man in life is the man who has the best information*

DMG Blockchain Solutions (TSXV:DMGI) has closed a major transaction that was announced on the same day the bitcoin miner and blockchain services company started trading on the Toronto Venture exchange in early February: a cash and share deal to acquire BlockSeer, an analytics and forensics company that allows users to “follow the bitcoins” as they move through the blockchain.

The potent combination is expected to give DMG a strong competitive advantage, by providing leading-edge cryptocurrency forensics and real-time risk scoring for compliance and anti-money laundering. The tie-up also converges blockchain with artificial intelligence (AI), using data that can be tracked and monetized using blockchain technology, aided by Blockseer's blockchain and data analytics expertise.

Headquartered in Silicon Valley, California, Blockseer's current team comes from Stanford, Harvard, University of Chicago, Carnegie Mellon and Columbia with deep experience in artificial intelligence, big data, and blockchain - led by CEO and founder, Danny Yang. Its advisors include Andreas Weigend, Bill Tai, Stephen Sorkin, Vas Bhandarkar, Phil Porras, and Brian Klein; some of its influential shareholders include Charlie Lee, the founder of Litecoin.

The company provides data analytics and uses AI to provide intelligence into what is happening with digital currencies and blockchains – which is of crucial importance since the cryptocurrency and blockchain markets remain largely unregulated. Having Blockseer on board adds a layer of safety and credibility to DMG, thus putting it a cut above the rest of blockchain

companies who lack such transparency.

Blockseer has worked with several law enforcement agencies including the US Secret Service, the FBI, and the IRS. It also provides Ethereum blockchain data services for blockchain.info, one of the world's largest cryptocurrency wallet providers, and holds two intellectual property patents.

"To date, DMG has received recognition as a market leader in the crypto mining space and now with the Blockseer acquisition, DMG can claim leadership in the blockchain development arena and deliver on its commitment to be a diversified blockchain company," said Daniel Reitzik, CEO and director of DMG. "Blockseer is not a single blockchain application, but a blockchain development engine for multiple applications with well-known global customers. We believe that the Blockseer team are the among the most talented team in the industry today and we welcome Dr. Danny Yang and the Palo Alto team to DMG."

DMG chairman and founder Chris Filiatrault notes that the DMG-Blockseer combination is a significant opportunity for shareholders, considering DMG's presence in Japan, the largest crypto market in the world.

DMG currently provides bitcoin "Mining as a Service" (MAAS) in Japan, the first country to regulate cryptocurrency and where more than 50% of all global cryptocurrency trading occurs. In December the company received a \$3 million order from Bitmasters, a Japan-based marketing group of nearly 40,000 bitcoin traders and influencers, and in February a second \$3 million order was placed with Forside Financial Services, another Japanese company.

Filiatrault said DMG has already arranged for Danny Yang to visit Japan, and looks forward to sharing its progress in short order.

Under its MAAS model, DMG provides hosting and management services to clients who want to become bitcoin miners. In exchange for operating and maintaining the servers, DMG receives a monthly fee, giving the company consistent lease revenue regardless of whether bitcoin rises or falls.

Over the past year DMG has evolved into a full-service blockchain company

that offers superb diversification in the form of four revenue streams: bitcoin mining, "Mining as a Service" (MAAS), forensics & data analysis, and blockchain software management.

With DMG's [new mining facility in BC, accessing up to 85 MW of power and thousands of ASIC miners](#), and recent acquisition of Blockseer, a leading Silicon Valley Blockchain development company, DMG is setting itself up to be a major force in bitcoin mining and blockchain in North America. [Read more about DMGI and its four revenue platforms here.](#)

I continue to be optimistic about cryptocurrencies and blockchain and see a very bright future for DMG. The company is on the move and for that reason is on my radar screen. Is it on yours?

If not, maybe it should be.
